

Titan ICT is now BAI Communications

Same team. Enhanced capabilities.

A NEW CHAPTER

From May 2026, Titan ICT becomes BAI Communications.

This brings together two organisations with decades of experience across Australia's most critical communications challenges, forming a single team with greater reach, deeper capability and one point of accountability from strategy through to operations.

BAI delivers innovative connectivity solutions to broadcasters, governments, mobile network operators, enterprises, transport operators and venues. We operate one of the world's most extensive broadcast networks, delivering fully managed television and radio services to 99% of the Australian population. During crises such as natural disasters, national broadcasters depend on BAI to maintain vital communications, while emergency services trust us to keep them connected and informed.

In 2025, [BAI acquired Titan ICT](#), an advanced engineering company specialising in private networks for mining, resources and energy industries. This integration strengthens our position as Australia's leading mission-critical network provider, combining infrastructure scale with deep engineering expertise.

As 5G transforms connectivity, BAI leverages its global experience to enable comprehensive coverage in buildings, tunnels, venues, remote mining and resource operations and other challenging environments.

IF YOU'VE WORKED WITH TITAN ICT

You're working with the same people, the same technical expertise and the same commitment to delivery. Now backed by greater resources, broader capability and a national infrastructure platform that strengthens what we can deliver for your operations.

WHAT WE DELIVER

BAI Communications delivers end-to-end communications infrastructure and ICT solutions across the full asset lifecycle. From strategic ICT advisory and independent assessment through to engineering design, complex systems integration and 24/7 managed services, we provide one point of accountability from strategy to support. Backed by stable, long-term shareholders, we have the financial strength and willingness to own assets and invest capital in the programs that matter most to our customers.

Our solutions span broadcast infrastructure, public wireless, private wireless networks, critical communications, network solutions and smart precinct development across mining, energy, transport, utilities, government and enterprise sectors.

Whether that's keeping national broadcasters on air during a natural disaster, connecting emergency services across a state-wide public safety network, designing a private 5G network for a remote mining operation, or delivering seamless in-building coverage across a major transport corridor, we bring the technical depth, national infrastructure and operational capability to deliver in Australia's most demanding environments.

- Strategic ICT advisory
- Engineering and design
- Private wireless networks
- Public wireless
- Complex systems integration
- Broadcast infrastructure
- Support and managed services

ALREADY DELIVERING TOGETHER

Sydney Metro West

In early 2026, BAI Communications was awarded the contract to deliver critical communications infrastructure for Sydney Metro West, part of Australia's largest public transport project. The solution brings together private 5G for operational train communications and signalling, public safety network connectivity for NSW emergency services, and seamless 4G/5G mobile coverage across all stations and tunnels. It is exactly the kind of complex, multi-technology, mission-critical program our combined capability is built for.

SOLUTION INCLUDES

Private 5G for operational train communications and signalling

Public safety network connectivity for NSW emergency services

Seamless 4G/5G mobile coverage across all stations and tunnels

THE SECTORS WE SERVE

Mining and resources

Oil, gas and energy

Transport and rail

Ports and logistics

Utilities

Government and public safety

Venues and precincts

Healthcare

Broadcasters

Network operators

Satellite owners and operators

Our solutions are purpose-built for Australia's most demanding operational environments.

CLIENTS INCLUDE

Rio Tinto, BHP, Fortescue Metals Group, Queensland Rail, NSW Telco Authority, MTW Sydney Metro West, Origin Energy, Arrow Energy, Optus, Telstra, ABC, SBS, Southern Cross Austereo.

OUR SCALE

100+

years combined experience

540+

employees

745+

transmission sites nationally

99%

population coverage for broadcast

600+

public safety P25 sites (NSW)

24/7

Network Operations Centre (NOC)

Licensed spectrum in key metropolitan and regional areas and offices nationwide.

BACKED BY GLOBAL REACH

Part of a global network.

We are part of a global network alongside [Boldyn Networks](#), our sister organisation operating across the Northern Hemisphere, delivering communications infrastructure across 6 transport networks, 300+ major venues and 130+ private networks globally.

Together we are majority owned by CPP Investments and minority shareholder AIMCo, enabling us to leverage international expertise while maintaining focus on Australia's unique connectivity needs.

6

major metropolitan transport networks globally

300+

marquee venues globally

130+

private networks globally
