

# Unlock secure, uninterrupted connectivity with our private mobile network solutions

Free your operations from network overcrowding and bandwidth constraints with our solution, designed for ports, which guarantees 24/7 reliability.

The port industry is undergoing transformative shifts driven by increased trade volumes, regulations, and sustainability concerns. In this rapidly changing landscape, seamless and secure connectivity is the key to enabling ports to navigate these challenges. Our connectivity solutions are designed to meet these urgent needs.

Our private mobile network (PMN) solutions ensure capacity and coverage across your entire operation, enhancing your port's efficiency, supporting digital adoption, and, most importantly, strengthening security. With our solutions, you can be confident in the safety and security of your operations.

With 4G/LTE or 5G power, our networks deliver the performance and the low latency required to provide real-time insights. These insights empower you with better operational choices, problem-solving, and high-end IoT implementations, giving you control and confidence in your operations.

The ability to connect thousands of devices simultaneously, with no performance loss, means endless possibilities—from autonomous assets to remote-controlled units and ensuring your teams' safety.

At BAI, our extensive experience delivering private mobile networks across a wide range of industries makes us the ideal partner to connect your port or logistics facility.

## Features

### Reserved capacity

### Widespread coverage

### Robust security

### High speed and low latency

### Uninterrupted mobility

### Assured performance

## Benefits

Only your devices can use the network, guaranteeing better performance

Connect every device throughout your port or facility

Controlled access with data retained inside your protected zone

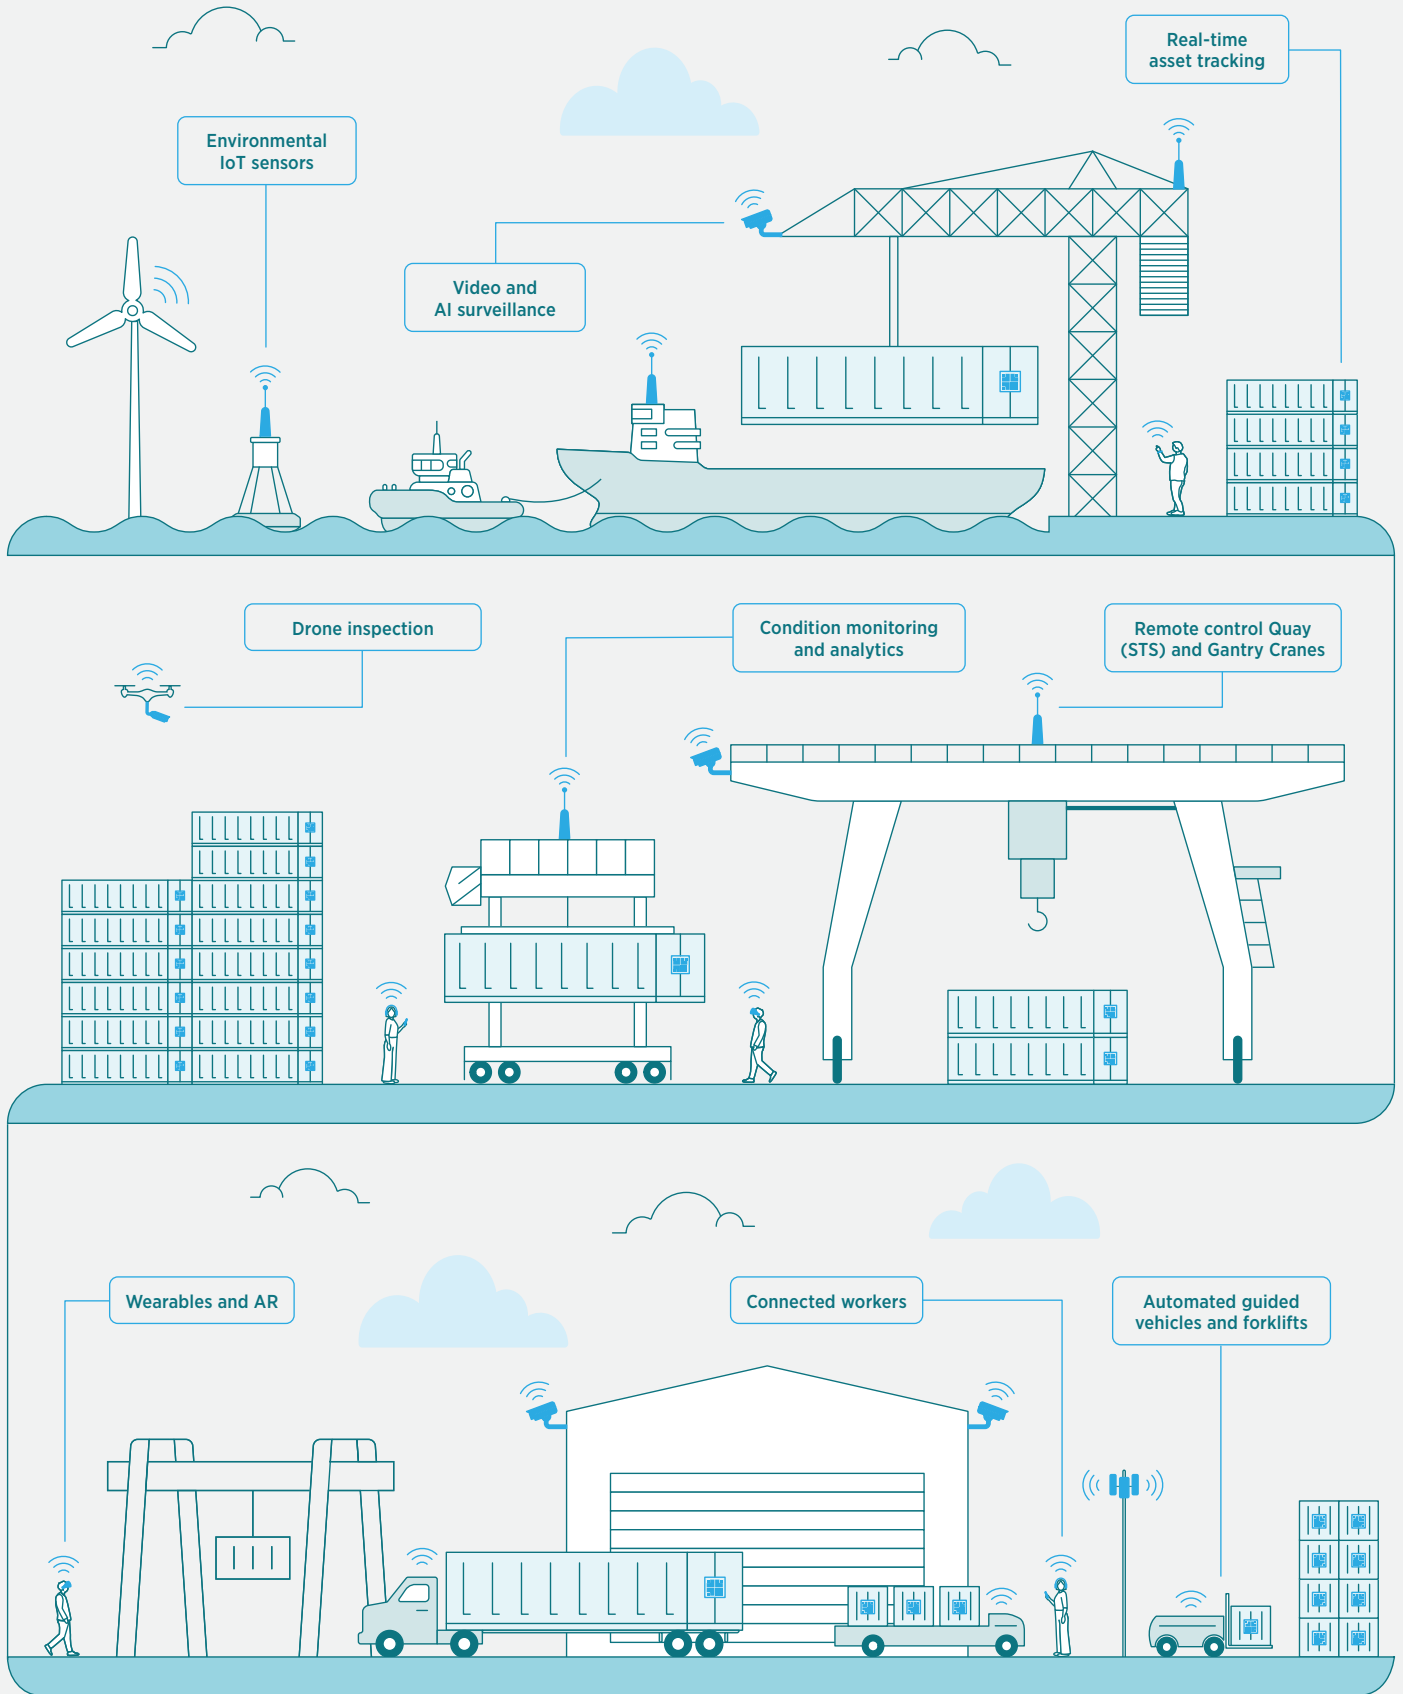

Enables applications that demand ultra-reliable, low-latency connectivity

Seamless handovers between radio nodes at up to 500 km/hour

Backed by service-level agreements that ensure high availability and reliability
