Smart, scalable connectivity from storefront to stockroom, delivering operational excellence and connected customer experiences

Future-ready private mobile networks and in-building solutions for smarter operations, better customer experiences, and safer environments.

In today's competitive retail landscape, customer expectations are higher than ever. Seamless mobile coverage, real-time data access, and secure communication are essential for creating engaging in-store experiences and optimising operations.

From point-of-sale transactions and inventory management to staff communications and security systems, every part of the retail ecosystem relies on uninterrupted connectivity.

BAI's in-building connectivity and private mobile network solutions offer a flexible, modular approach to digital transformation. Whether deployed independently or as an integrated solution, they provide the robust, secure infrastructure needed to support evolving retail operations across your store footprint.
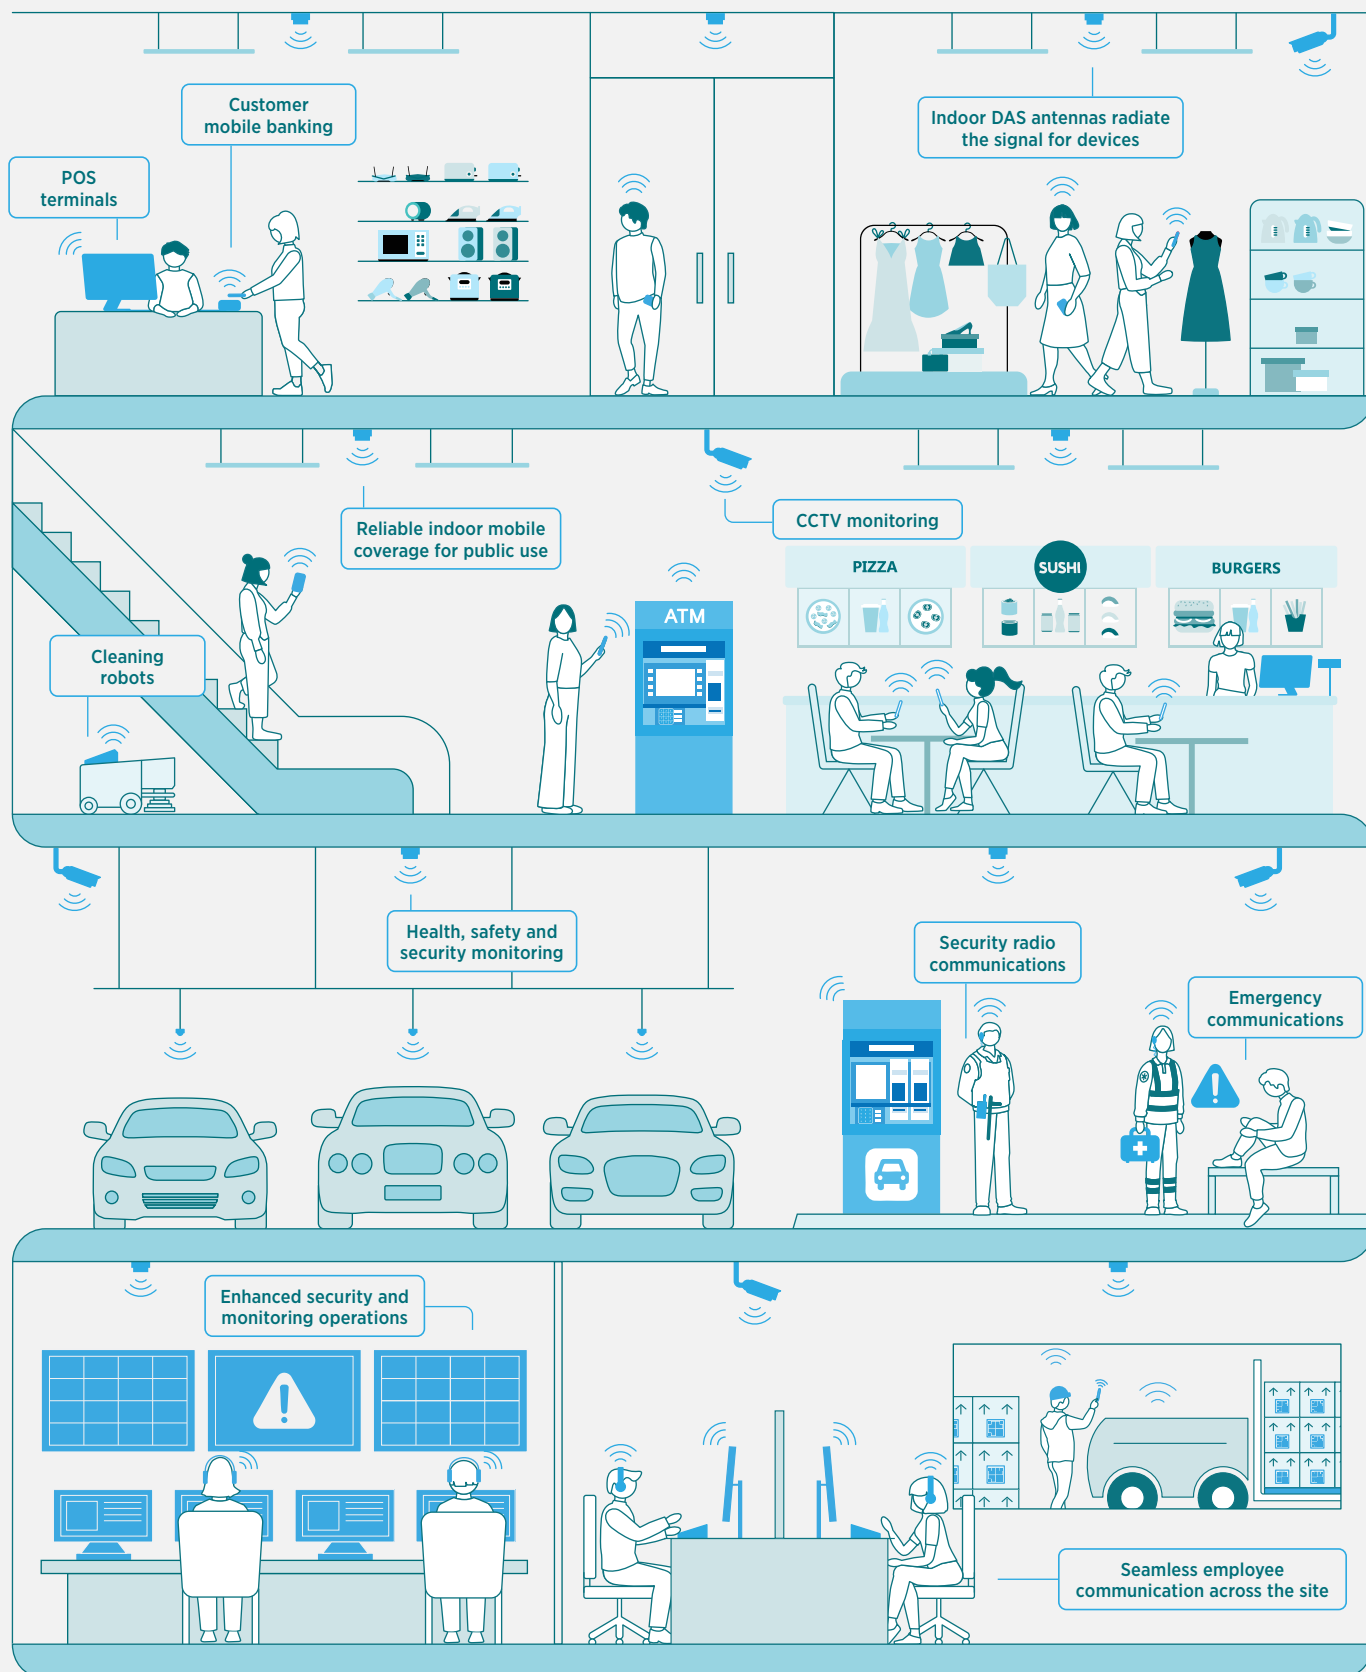

Whether its ensuring POS terminals are always online, enabling live CCTV feeds, or supporting staff communications and mobile customer apps, BAI ensures reliable connectivity across your retail environment – from the stockroom to the shopfront.

With BAI's tailored solutions, retailers can unlock new efficiencies, safeguard operations, and create connected customer experiences that drive loyalty and growth, every day and when it matters most.

Features		Benefits
	Essential mobile coverage	Ensure customers and staff stay connected throughout the entire store, including underground carparks, stockrooms, and sales floors.
	Enhanced safety and security	Enable always-active CCTV monitoring, staff duress alerts, and emergency communication systems with minimal latency and full network control.
	Strengthened emergency response	Equip your team with high-performance Push-to-Talk, intercom, and mobile calling capabilities, even during high traffic or emergency events.
	High speed and low latency/ operational efficiency	Support real-time inventory updates, POS terminals, and cleaning or delivery robots through reliable, always-on connectivity.
	Robust Data security	Protect sensitive transactional and operational data using a dedicated network that prevents interference and unauthorised access.
	Customer engagement and loyalty	Enhance the customer journey with strong in-store mobile coverage that supports digital wayfinding, mobile apps, and real-time personalised offers.
